

With XM Satellite Radio, the listening public finally has true choice in listening to music, news, public interest, weather and traffic. We are no longer locked into whatever the mega corporations want us to hear, and in most cases we are not obligated to listen to their commercials. I pay for my subscription to satellite radio for all of these reasons and it should not be up to the National Association of Broadcasters to determine what I can or can't listen to. Traffic and Weather are a regular part of all radio stations and they should certainly remain a part of XM Satellite Radio.
